These graphics from the NUCCA site also show further the types of subluxations that can occur at the upper cervical spine level. Which one actually occurs in each individual really depends upon their prevailing anatomy at that level and the direction and amplitude of the force imparted during the trauma they received.

Laser surgery is a type of surgery that uses a laser (in contrast to using a scalpel) to cut tissue.. Examples include the use of a laser scalpel in otherwise conventional surgery, and soft-tissue laser surgery, in which the laser beam vaporizes soft tissue with high water content.. Laser surgery is commonly used on the eye. Techniques used include LASIK, which is used to correct near and far ...
