Wireless sensor network (WSN) refers to a group of spatially dispersed and dedicated sensors for monitoring and recording the physical conditions of the environment and organizing the collected data at a central location. WSNs measure environmental conditions like temperature, sound, pollution levels, humidity, wind, and so on. These are similar to wireless ad hoc networks in the sense that ...

In many industries initiatives are taken to engage consumers in entirely new ways. Smartphones and other smart devices are key in many of these scenarios, whereby the IoT, data-driven activities and mobility are never far away. However, the consumer electronics market is going through turbulent times.
