Positron-emission tomography (PET) is a nuclear medicine functional imaging technique that is used to observe metabolic processes in the body as an aid to the diagnosis of disease. The system detects pairs of gamma rays emitted indirectly by a positron-emitting radionuclide, most commonly fluorine-18, which is introduced into the body on a biologically active molecule called a radioactive tracer.

La più autorevole voce ad accreditare la possibilità di creare un'arma di questo tipo si deve a Nikola Tesla, che alla metà degli anni trenta fece alcune affermazioni di rilievo circa un'arma chiamata "teleforce" (lett. "forza a distanza") che propose inizialmente al Dipartimento della difesa della sua nazione di adozione, gli Stati Uniti. La stampa la soprannominò "raggio della pace" o ...
