A quasar (/ Ēˆ k w eĒˆ z ĒˆĒˆr /) (also known as a QSO or quasi-stellar object) is an extremely luminous active galactic nucleus (AGN). It has been theorized that most large galaxies contain a supermassive central black hole with mass ranging from millions to billions of times the mass of our Sun. In quasars and other types of AGN, the black hole is surrounded by a gaseous accretion disk.

Arxivsorter ranks papers from arxiv.org based on your own interests.. It simply asks for a few favorite authors and then estimates the relevance of arbitrary papers using information from authorship proximity and semantic similarity.. It is not a filter and therefore does not lose any information.

L'intensité macrosismique, qu'il ne faut pas confondre avec la magnitude, caractérise la sévérité de la secousse sismique au sol. Elle se fonde sur l'observation des effets et des conséquences du séisme sur des indicateurs communs en un lieu donné : effets sur les personnes, les objets, les mobiliers, les constructions, l'environnement.
