threaded fittings on the assumption that they will solve the problem of splitting through over-tightening. These statements are backed by the evidence of hundreds of "failure reports"-each of them carefully investigated in quality as a sum of lab tests-and by basic engineering data concerning standard pipe thread design.

### **How to Avoid Problems with Threaded Plastic fittings**

o When cutting a thread, the major diameter = the blank diameter of the threads. o When thread rolling, material below the pitch diameter is displaced during cold form process and the excess material is squeezed up into the new major diameter. Blank diameter of rolled thread = Max pitch diameter - .002" • CJWinter | www.cjwinter.com
